

**REMARKS--General**

In the specification, Applicant has found that the worm gear (92) was introduced for the first time in page 8 second to last line and has therefore amended the text accordingly.

The claims were amended according to Examiner's suggestions. Claim 3 has been amended to contain the limitations of claims 4 and 5 so that it now overcomes objections over the cited prior art. With the cancellation of claims 4 and 5, dependencies were changed in later claims to claim 3, and claim 8 has also been canceled as per Examiner's suggestion.

Hoping that this application can be placed in allowable condition as soon as possible and without the need for further proceedings.

Very Respectfully,

Josephus

**Applicant pro se**
